G&V introduces 747Pro Bluetooth GPS Data Logger

G&V Global Tech Co., Ltd. has released the 747Pro Bluetooth GPS Data Logger, which integrates a MediaTek 66-channel GPS chipset. The 747Pro Data Logger incorporates an all-in-one, cost-effective portable GPS logging solution. With its onboard memory, it allows you to log your routes by way of time, distance, and speed. Points of interest (POI) can also be recorded by a push button. With a built-in buzzer alarm, the 747Pro will beep to let you know whether a GPS location has been fixed or a POI recorded successfully. And by means of its very user friendly software utility, it can also show your track on Google Earth.

The 747Pro features with assisted GPS technology for indoor locations. Each location can acquire a GPS position in less than 15 seconds and log up to 125,000 waypoints, using an embedded sensor for smart operation. It is powered by a 1000mAh rechargeable and exchangeable battery with up to 25hrs operating time.

The 747Pro GPS Data Logger is small and robust, and a suitable GPS data logger for such applications as recording your route tracking, managing trip expenses, mountain climbing, fleet and asset management, and the increasingly popular geo-tagging of photos.

SCC launches SC800 series of rugged handheld computers

The SC800 Series of versatile rugged handheld computers, from Shin Chuan Computer, is designed for use in harsh environments and varied applications. Compact and light, SC800 Series terminals adapt themselves to all applications requiring Data Collection, ICT & Mobility at the same time.

The SC800 series is powered by the Marvell XScale PXA270 520MHz Processor and 1GB ROM & 128MB RAM memory. In addition, integrated WiFi 802.11b/g, GPRS/EDGE and Multi RF make data transmission easily and immediately available. There is a sunlight readable 3.5 inch High Resolution Touch Screen for clear viewing both indoors and outdoors. SC800 is designed to be more durable than a consumer-grade PDA. Considering the working environment is unpredictable, SC800 series have IP65 certification, for protection against dust and water spray. The rugged design allows the SC800 series to withstand a 1.5 meter drop onto concrete. The optional 1D or 2D barcode scanner, GPS or RFID reader are suitable for a range of applications, including Transportation, Distribution, Warehousing, Retail, Logistics, and Manufacturing.

Compro Technology launches the VideoMate IP70

Compro Technology has launched the VideoMate IP70, the world's first day and night camera with true infrared (IR) lighting and HD resolution, targeted at the home and SOHO markets.

VideoMate IP70 is a high performance H.264 IP camera which delivers high-quality video and is equipped with true day/night functionality. IP70 features a unique cluster of professional class IR LEDs for 24-hour, 7 days a week surveillance under any lighting conditions. A light sensor will turn on the array of IR LEDs to illuminate the scene automatically when the lighting conditions are too dark for the image sensor, and switch off the IR LEDs when the lighting conditions return to normal.

Moreover, IP70 bundles a full range of applications to provide an intelligent surveillance total solution. The iWizard is a smart installer to make the complicated network camera installation a simple and fast process; WebVUer is an intuitive IE based video management software that includes all the key features required for trouble-free monitoring and home surveillance. ComproView is a powerful feature-rich 32-channel professional grade multi-camera video management solution for business surveillance.

In addition, IP70 provides two-way audio support by including a built-in microphone and speaker.

Korenix offers JetNet 5628G Gigabit Managed Switch

Korenix has unveiled JetNet 5628G, an IEC61850-3 & IEEE1613 certified Industrial Modular Managed Ethernet Switch for ensuring high quality and reliable network communication in power substations. In addition to the fanless and modular slot design, LLDP, JetView Pro and other advanced L2 management features, the switch supports 90~264VAC, 88~370VDC and 24/48VDC power input types for flexible use in field power constructions.

Equipped with 3 modular slots, JetNet 5628G provides several types of Fast Ethernet modules, allowing 24 copper and 18 fiber ports. As a result it delivers maximum flexibility and simple interface exchangeability for various network connection needs while reducing device unit costs. With its wire speed switching capability, JetNet 5628G ensures an uninterrupted and reliable traffic transmission in field sites and control rooms. Users can trunk up to 8G uplink bandwidth and form two independent gigabit rings through the 4 gigabit combo ports. These dual gigabit rings allow JetNet 5628G to perform as an access-level switch in power substations. JetNet 5628G also supports Korenix's patented MSR redundant ring with 5ms link recovery time and zero ms restoration time.
